

“...Without a doubt it’s the most flexible and versatile system for windows, conservatories, doors and roofs...”

Cliff Spooner. Window World

“The First Degree software I use is much more than just a windows package. It helps staff using the system make critical business decisions at any point on the work flow, and by integrating with other systems it helps keep critical information to hand - from the initial quote to customer aftercare. These are all crucial factors for my profitability. Without a doubt it’s the most flexible and versatile system for windows, conservatories, doors and roofs, and after 12 years using the system it’s still getting stronger all the time.”

First Degree Systems - We speak your language

Number 1 in sales, Number 1 in functionality, Number 1 in the industry. No wonder we’re called First Degree!

Who else delivers:

- Integrated systems that manage the entire flow of work from the enquiry phone call through to delivery
- Seamless processing from one customer-friendly interface
- A solution that combines windows and conservatory design in one package
- Team First, our expert support unit, available by phone and email
- Fully functional online ordering for windows & conservatories

Look at this system functionality:

- Drag & drop to improve order entry, improving entry speeds and accuracy
- Design conservatories and windows on the same product, improving performance
- Add new versions, licenses and modules as your company grows

- Integrate to a huge variety of machinery
- User friendly database set up for wood, aluminium, uPVC and steel
- Track the whole job with our multi-frame, one-screen Wall View feature

We speak your language

- All our engineers and technicians who visit your site come from a window fabrication background, so you know you’re talking to someone who speaks your language.
- With First Degree’s seamless, integrated products we know we’ve got the tools to make you look good – and make you more profitable.

We guarantee to match any quotations for fully comparable systems
